

Windows Server 2008 Infrastructure Services

It's the most flexible and robust Windows Server operating system to date

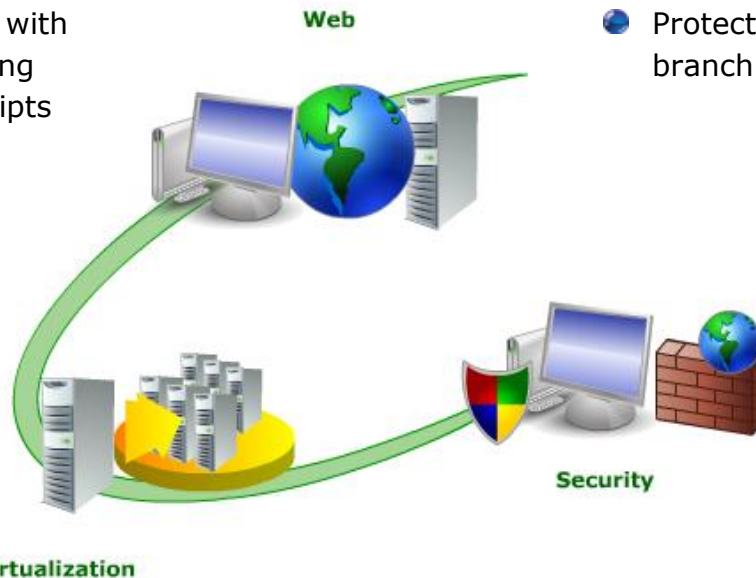

Windows Server 2008 R2 includes new web and virtualization technologies and features such as:

- Reduce costs with server consolidation through virtualization

- Reduce time associated with administrative tasks using Windows Powershell scripts

- Protect Domain Controllers in branch offices deploying Read

- Network Access for protecting the corporate network from non-trusted devices

- Secure collaboration with clients and partners using Federated Rights Management

- Improved and simplified cluster management

- Option to install in Server Core mode, using less resources or reduced attack surface

- Virtualization of applications with TS Remote App
